

TePe Recommendation Tool Guide

- 1) Start page with a language picker. Select the preferred language.

- 2) Product selection stage. You need to at least select one product to go to the next stage.

- 3) Assign products stage. Please select the product on the left hand side and then assign it to the different gaps where this product should be used. Should it be used for the full mouth, please select “Apply to entire mouth”, should it be used for upper/lower – please select accordingly.

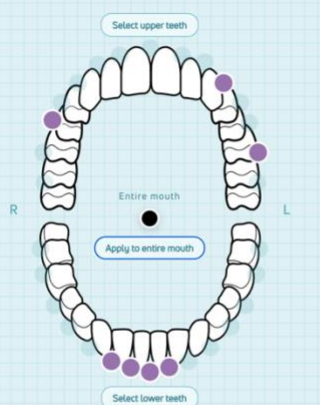

TePe Select products → Assign products → Patient instructions → Summary Help ↻ Start over

Assign selected products

Select a product and click in the teeth model where you want the patient to focus cleaning. Optional [skip this step](#) to just send a generic product recommendation.

- 4) Patient instructions stage. Here you should write any instructions needed for the patient. You should also mark out if there are teeth missing or teeth in need of extra care.

TePe Select products → Assign products → Patient instructions → Summary Help ↻ Start over

Patient instructions

Add information about teeth condition and attach instructions to your patient.

Instructions

Remember to go easy on your bottom teeth.

Teeth that require special attention

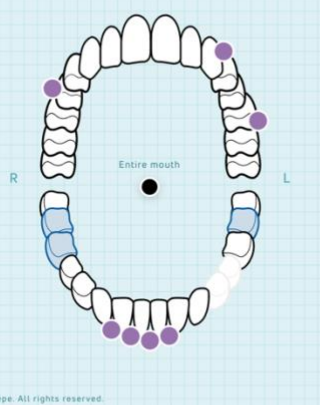

For example: Bridge crown, implant, overhang, open contact.

☒ Mark teeth 3 selected Clear

Missing teeth

Does your patient have missing teeth? Select them, if any.

☒ Mark missing teeth 2 selected Clear
